

V-Balanced Driver for Your PC Audio Studio

Infrasonic Quartet V-Balance Driver

Developed by SIMS Corporation's award winning Infrasonic development team, V-Balanced™ Input/Output (IO) is a World First Technology that allows Quartet to be used as a balanced 2-in/2-out interface, instead of as an unbalanced 4-in/4-out interface. In the driver control panel, the IO type can be changed with a simple click of the "Balanced Link" button.

V-Balanced™ technology is available via a driver update (v1.18.4). The driver allows you to monitor a pure, high-end balanced signal without upgrading your hardware. Your V-Balanced™ Driver can be changed to "4 unbalanced-in x 2 balanced-out" or "2 balanced-in x 4 unbalanced-out," depending on your needs. The V-Balanced™ Driver provides a simple alternative IO type, as well as easy and flexible control of the IO channels.

Versatile Connectivity of Quartet

Quartet is able to connect in a variety of ways, depending on your system.

Support 4X4, 4X2, 2X4, 2X2
